

## ICE MEMO

O : Dennis Letl

DATE : July 8, 1993

SUBJECT : BDOC GIS Efforts

FROM : Rod Gonzalez 

I contacted MaryRose Repine, BDOC Administrative Officer, in response to an article which appeared in the 06/29/93 BDOC Update Letter regarding their acquisition of a GIS for analyzing resource data (wetlands, endangered species, etc.). I informed her of our program, our Geo/SQL GIS, and of the information that's on it concerning special status species. MaryRose stated that she was not aware that a working GIS containing information they need was available in the Department.

She expressed interested in our system, however she said that BDOC is receiving assistance from and has forwarded funds to the Division of Planning towards obtaining a GRASS GIS. I discussed with her the pros and cons of GRASS, file conversion and compatibility factors between the different GISs, and the characteristics and conveniences of Geo/SQL GIS.

MaryRose was impressed with the information I provided about our system and would like see a demonstration of our Geo/SQL GIS in the near future.
